SKILLS FOR LIVING AND LEARNING

OCCUPATIONAL THERAPISTS

PROMOTE FUNCTION, INDEPENDENCE AND ACHIEVEMENT OF EDUCATIONAL GOALS.

Occupational therapy

Occupational therapists in schools:
- work as members of the educational team which includes the student, parent/carer, teacher, teacher aides and specialist support personnel
- assist in developing and delivering programs that enhance or support students' education goals
- promote students' optimum wellbeing, function, independence and productivity at school
- consult with and provide resources to school staff, parents and the school community
- liaise with other agencies that provide services to students.

Occupational therapists assist students to develop functional skills for everyday life including:
- student/work skills (for example: organising self, handwriting and computer skills, and vocational skills)
- activities of daily living (for example: eating, dressing and using community facilities)
- play, leisure and recreation (for example: playground activities and participation).

Occupational therapists use specialised knowledge of the foundation skills and abilities required for learning including:
- movement and sensory skills (for example: hand skills, coordination of movement, strength and endurance, sensory awareness and processing)
- cognitive skills (for example: thinking, remembering, attending and problem-solving)
- psychosocial skills (for example: sharing, interacting with others and developing friendships).

Services

Occupational therapists contribute to students' education programs by:
- assessing students' development and the functional skills needed for school and everyday life
- analysing activities and modifying them for students, planning and designing curriculum adjustments with the team
- adapting equipment or the environment to help students participate as independently as possible in the school program
- advising on the use of technology and the best means of accessing devices for independence in areas such as communication, mobility and computer skills
- preventing or reducing the chance of further disability through specialist techniques such as hand splinting and advising on correct positioning during activities
- enhancing self-esteem by providing students with achievable, motivating tasks.
